

7 MINUTE LEARNING

01

Introduction

A contracture is a change to a person's ability to move their joints and limbs freely. Abnormal shortening of muscle tissue leads to the muscle being highly resistant to stretching. This can lead to permanent disability. It can be caused by fibrosis of the tissues supporting the muscle or the joint, or by disorders of the muscle fibres. A recent Dorset Safeguarding Adults Review* highlighted that contractures were one of the recommended areas of learning.

An increased awareness and understanding is needed around contractures and how to prevent them.

07

What to do next

Prevention is key!

Encourage movement and participation in ADL's, even simple steps like participating in their own personal care can help. Seek professional involvement from: Nursing, Wheelchair Services, Physiotherapists, OT's.

06

Learning:

Prevention of contractures

- Range of motion exercises- Physiotherapy
- Seating position- feet and legs
- Bed/sleeping position
- Splinting- hand and feet

Restoration

- Can take up to a year
- Painful and difficult

Learning:

02

Why do contractures develop?

- When people do not move or are not encouraged to move often enough
- When people remain stationary in their chair or bed for long periods
- When someone is unable to move on their own (following a stroke, injury, surgery or due to dementia)
- Poor positioning or support in their bed or chair
- Improper support and positioning of joints affected by arthritis or injury
- Inadequate exercising of patients with paralysis

03

Learning: what does a contracture look like?

Learning about contractures

05

Learning:

Ways Contractures affects the Provider

Loss of reputation
Risk of litigation
Difficulty Transferring
Staff morale
Difficulty moving and handling
Individuals have more intensive care needs

Learning: Impact of contractures on the individual

Increased pain
Impaired motor function
Reduced mobility
Reduced range of movement
Loss of function for Activities of Daily Living (ADL's)
Social participation/ isolation
Quality of Life is affected
Pressure sores
Hygiene and Infections
